

## CLMAG™:

The future of high-capacity is now.

- ▲ WEIGHT— 3.95 lbs. dry; a fully loaded 150 round **CL-MAG™** and a M4 are lighter than an unloaded M249.
- ▲ DESIGN— ammunition is contained individually inside the drum on sprockets, affording each cartridge its own separate space. Individual rounds are picked off the sprockets when they spin, unlike other dual drum designs with high friction convergence.
- ▲ To be used in conjunction with 30-round magazine as a force multiplier.
- ▲ The **CL-MAG™** external shell is constructed of durable aircraft quality aluminum. Internal components are comprised of lightweight polymers. Surface lubricity and durability is achieved with a hard anodized finish. These factors contribute to give the **CL-MAG™** outstanding performance never seen before in high capacity magazine devices.
- ▲ NO LUBRICATION REQUIRED
- ▲ When installed in the rifle, the **CL-MAG™** is the exact vertical height of a standard M-16/AR-15 30-round magazine.
- ▲ The **CL-MAG™** can replace some of the M249 belt-fed weapons with a lighter, high-volume firing automatic rifle that is a better logistical fit within military units.

# ARMATAC CL-MAG™:

## High Capacity and High Performance that Simply Dominates.

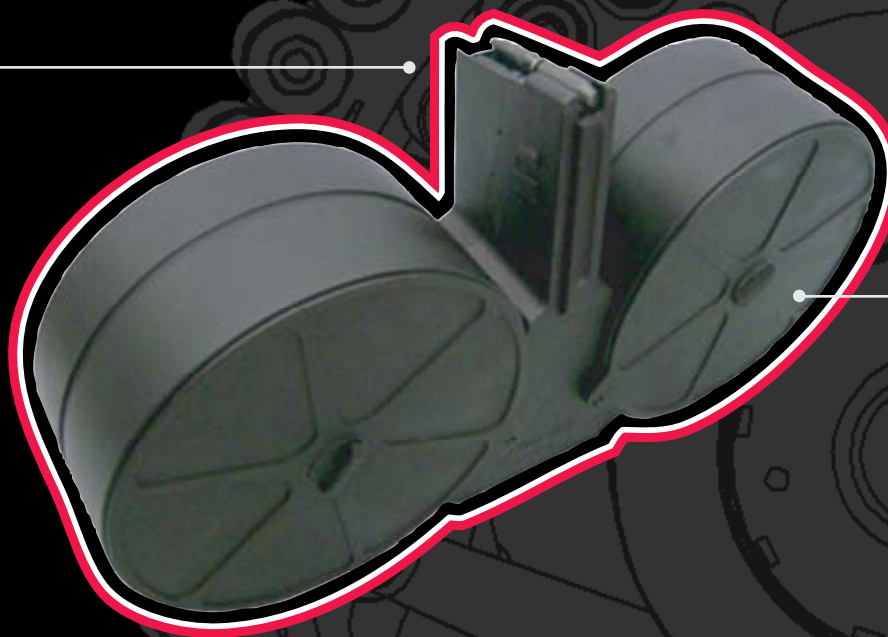

▲ Aluminum forgings provide a very strong and lightweight shell.

▲ Our drum internals have a proprietary new ultra-low drag design constructed from the highest grade composites.

▲ Billet aerospace aluminum allows for rigidity and thermal stability.

The Armatac Industries **CL-MAG™** is the most dominant accessory for your rifle. Constructed of the highest quality materials and backed by cutting edge design and engineering, the **CL-MAG™** is undoubtedly the finest high-capacity magazine device on the market. When you go into harm's way, choose the **CL-MAG™** from Armatac Industries.
